STATS 201A Lecture 11

Henry Liev

29 October 2026

$H_0 : \sum \beta_{ii} = 0$, there is no overall curvature
$H_1 : \sum \beta_{ii} \pm 0$
s^2 is an unbiased estimator of σ^2, $\mathbb{E}(s^2) = \sigma^2$
s^2 does not depend on any model, has $n_c - 1$ degrees of freedom
$y = \beta_0 + \cdots + \varepsilon$
